Neoadjuvant/Adjuvant behandling ved operabel ventrikkelcancer

gastrectomi

Neoadjuvant/Adjuvant behandling ved operabel ventrikkelcancer

Neoadjuvant/Adjuvant behandling ved operabel ventrikkelcancer

Cunningham Det al.

N Engl J Med 2006;355:11-20.

NGICGs retningslinjer fra 28.11.06

- Ca. venticuli, ECOG 0-1, stad. II-IV, <75 år
- 3 kurer ECX før og etter op (3-6 uker mellom kur og op), evt. med G-CSF
- Senter for kreftbehandling/Kristiansand: EOX

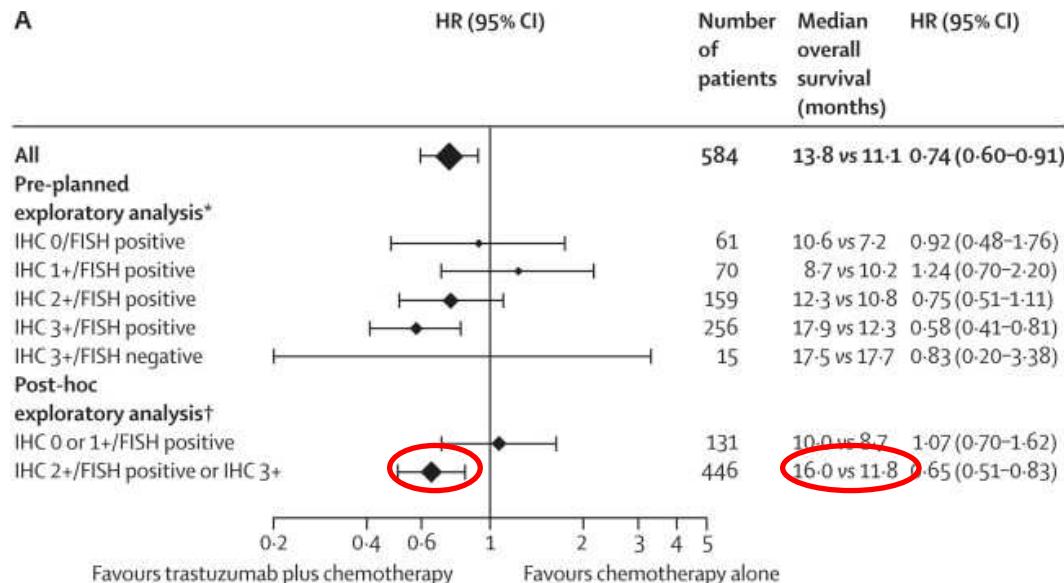

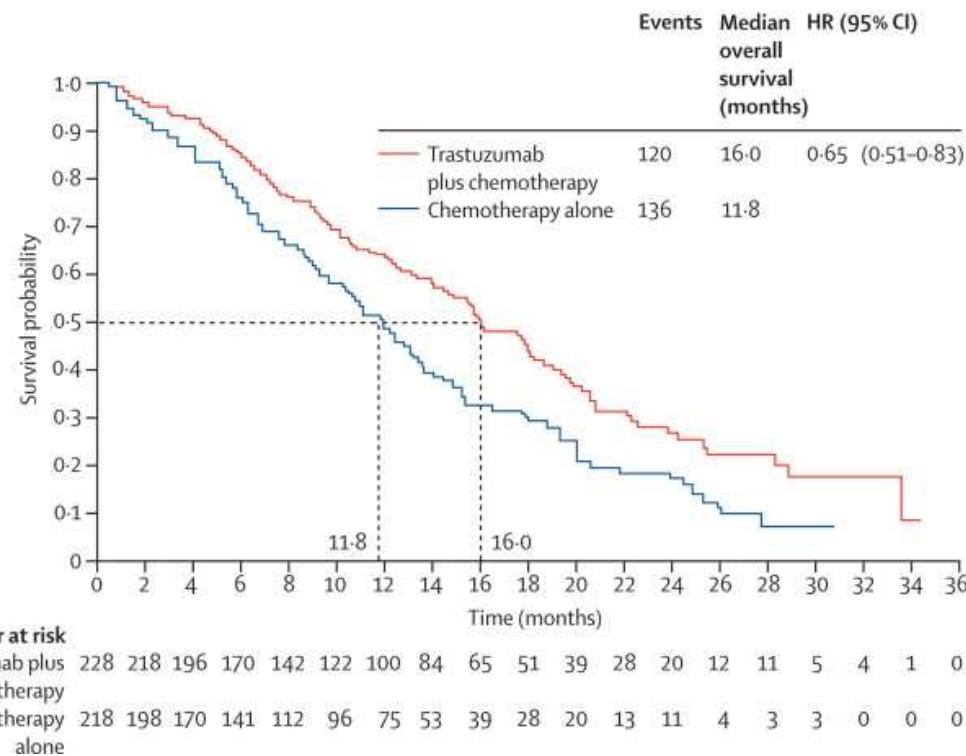

Oxaliplatin mindre toksisk og lettere å gi poliklinisk enn Cisplatin.

REAL-studie: Sumpter et.al.: BJC (2005) 92, 1976-83

- 4-armet, metastatisk ventrikkel-ca.: bl.a.:
- Respons-rate ECF 31%, ECX 35%, EOX 48%

Det var om kurativ ventrikkel,

nå går vi til palliasjons -behandling av ventrikkel-ca....

A**B**

Ventrikkel, stadium IV

Behandling av Ca. øsofagi

en personlig mening (evidence level 4) fra Christian
Kersten (SFK) og et forsøk på å være
kunnskapsbasert

- et utgangspunkt for en diskusjon -

To store caveats
ved tolkning av den eksisterende litteraturen

Er de publiserte pasientene de samme som vi ser ?

noen mennesker er blomstrende...

Er de publiserte pasientene de samme som vi ser ?

andre fremstår mer gråe...

i tillegg er ”spiserørskreft” ikke det samme som for 20 år siden...

Avbrekk:

Hva er forskjellen mellom svarte og hvite mennesker?

Hva er forskjellen mellom menn og kvinner ?

Changing Epidemiologic Landscape of Esophageal and Gastric Cancer

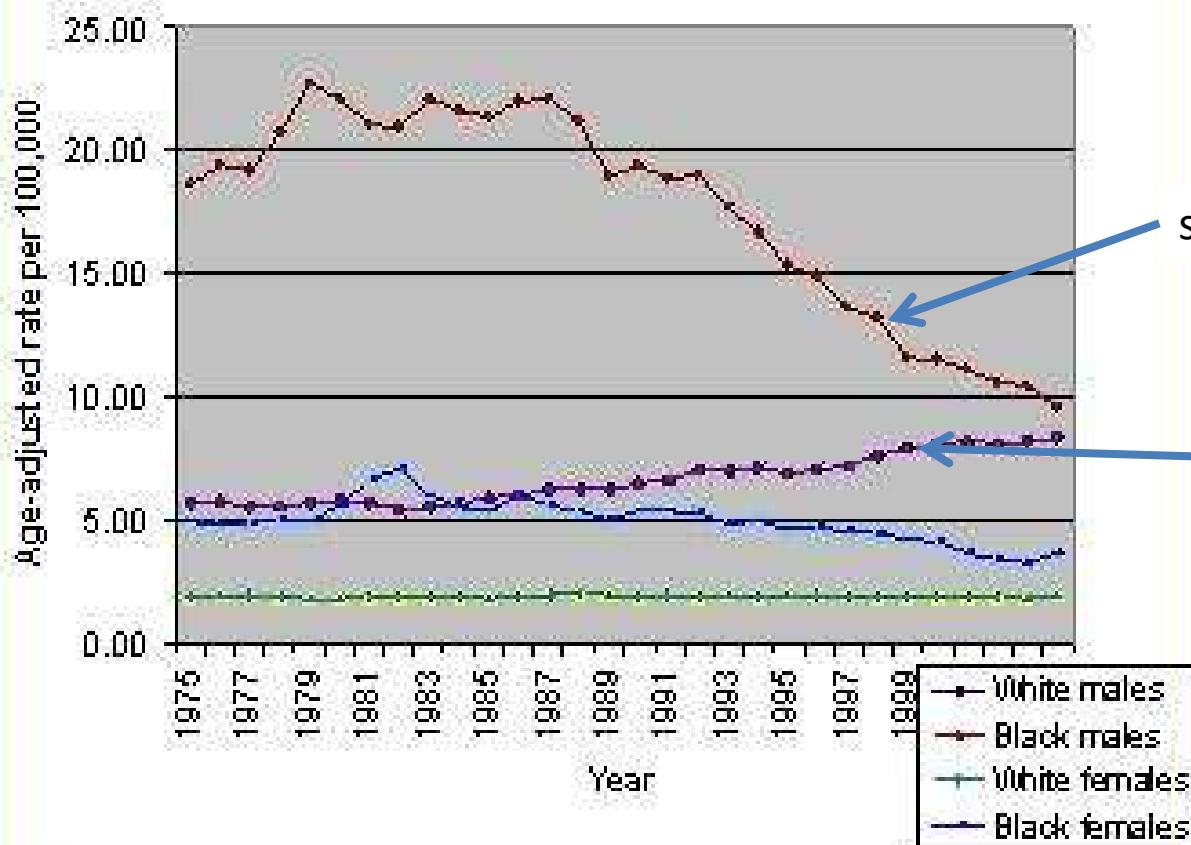

William J. Blot, Ph.D.

**Vanderbilt University
and
International Epidemiology Institute**

2008 GI CANCER SYMPOSIUM

Changes in incidence over time have been as or more pronounced for esophageal and stomach cancers than for any other cancer

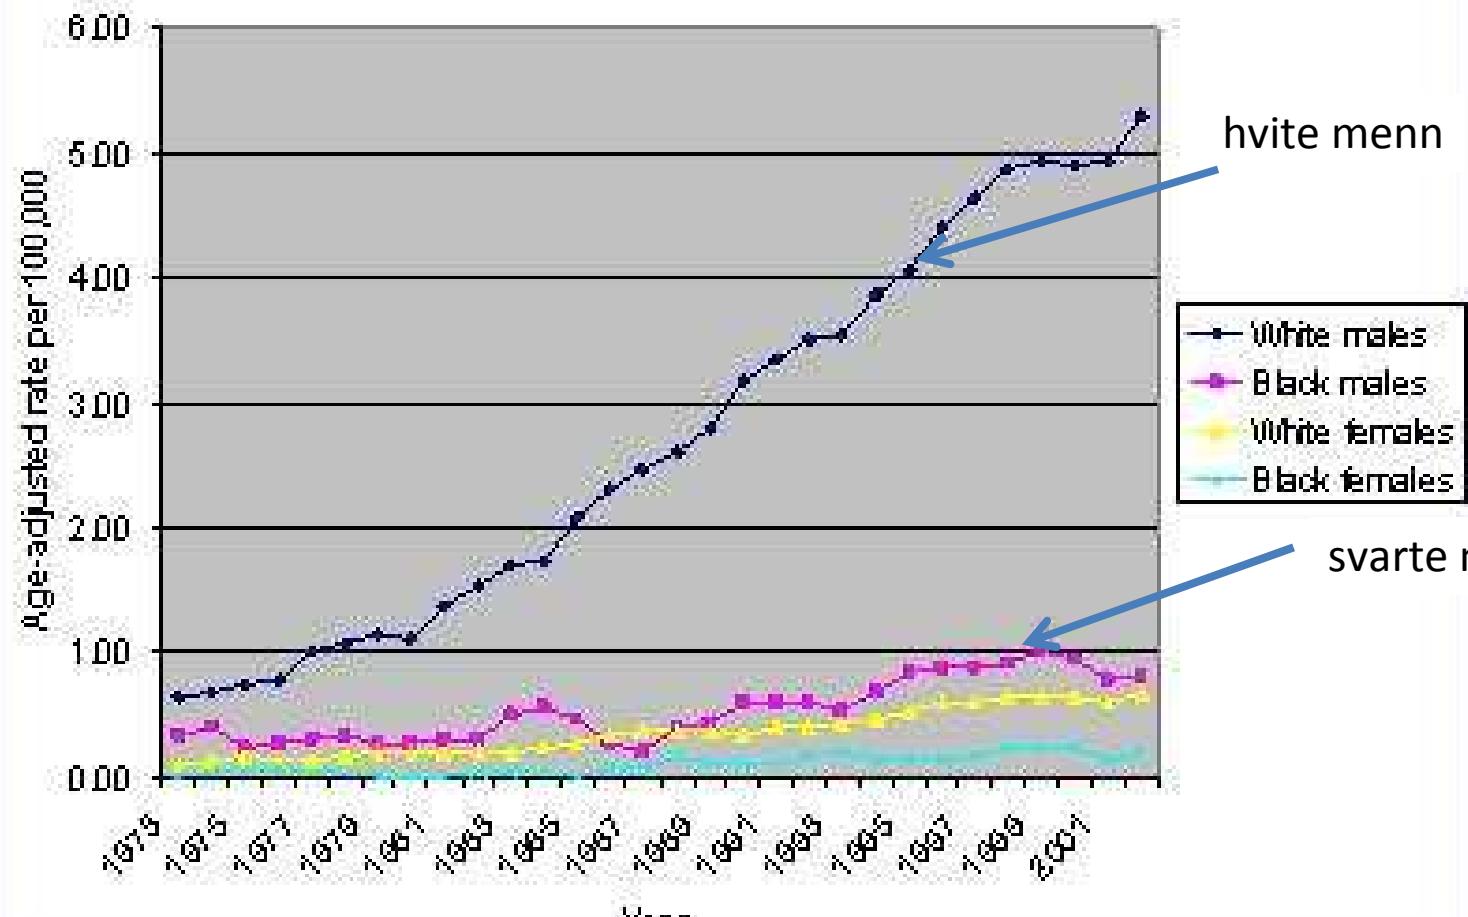

Trends during 1973-2004 in overall esophageal cancer incidence rates

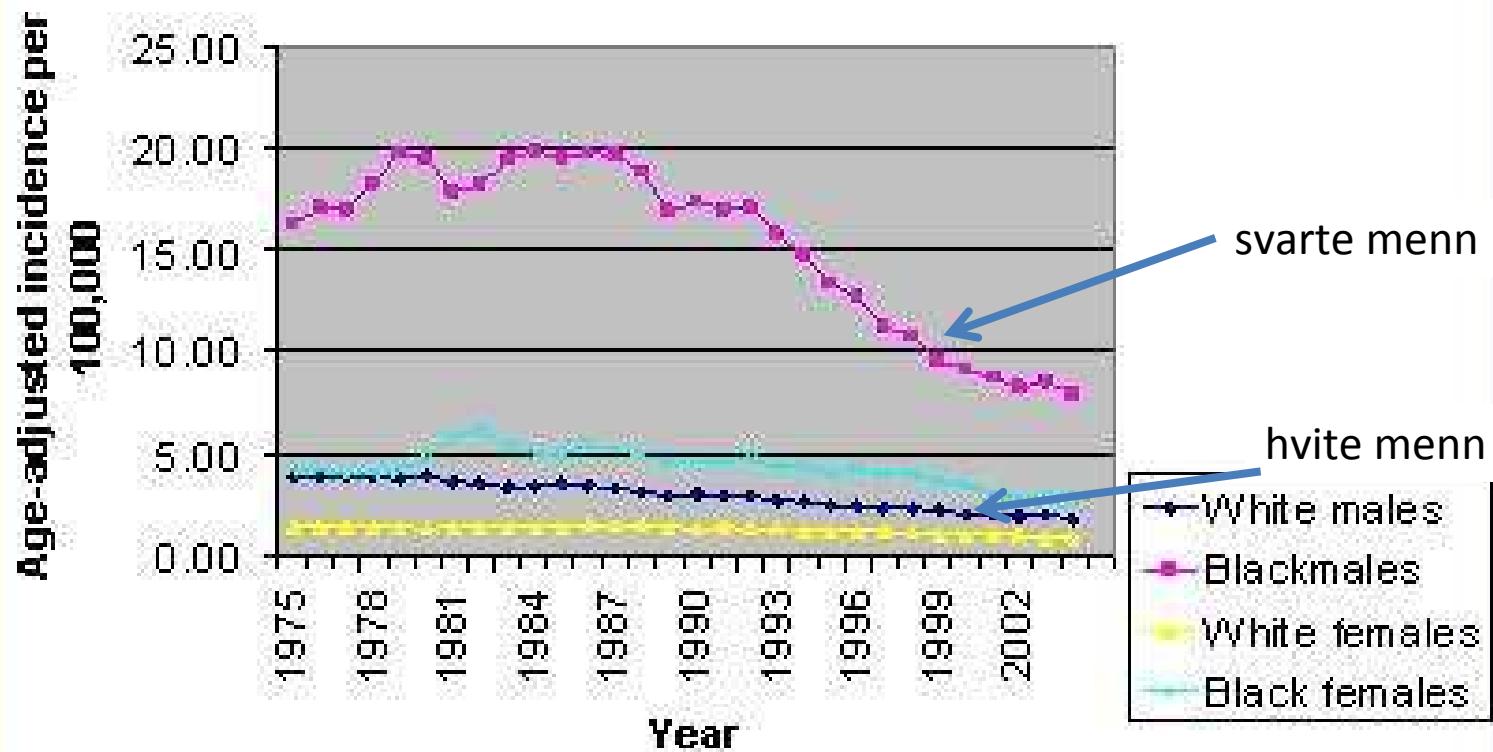

svarte menn

hvite menn

Trends during 1973-2004 in esophageal adenocarcinoma
incidence rates

Trends during 1973-2004 in incidence of squamous cell carcinoma of the esophagus

What is causing these striking
temporal trends and demographic
differences?

Answer:

What is causing these striking
temporal trends and demographic
differences?

Answer: It's not clear.

I 2012 behandles adeno og plateepitel-ca i prinsippet likt i Norge

TNM 2010:

- “Histology also influences the pattern of first recurrence after resection.
- In summary, there seems little doubt that esophageal SCC and adenocarcinoma represent two different diseases with characteristic pathogenesis, epidemiology, tumor biology, and outcomes.
- In acknowledgement of these differences, the most recent 2010 TNM staging system provides separate stage groupings.”

Eksisterende publikasjonene
beror på en blanding av adeno- og plateepitel-ca...

Operasjon vs Stråling

Et behov for mer samarbeid i randomiserte studier mellom kirurgene og onkologene !!

- prostata-ca
- tidlig lunge-ca
- enkelte hjerne-metastaser
- truende tverrsnitt
- etc etc etc
- ØSOFAGUS-KANSER

Skal resektable øsofagus-kansere opereres?

Onkologiske argumenter

Table 1. Overall Survival by Treatment Group*.**Table 1.** Overall Survival by Treatment Group*

Time, y	No. (%) Alive Following Radiation Therapy Only (Randomized)	No. (%) Alive Following Combined Modality Therapy	
		Randomized	Nonrandomized
0	62 (100)	61 (100)	69 (100)
1	21 (34)	32 (52)	43 (62)
2	6 (10)	22 (36)	24 (35)
3	0 (0)	18 (30)	18 (26)
4	0 (0)	17 (30)	13 (19)
5	0 (0)	14 (26)	10 (14)
6	0 (0)	12 (22)	6 (10)†
7	0 (0)	12 (22)	2 (6)†
8	0 (0)	10 (22)	...
9	0 (0)	4 (20)†	...
10	0 (0)	3 (20)†	...
Total dead (median, mo)	62/62 (9.3)	48/61 (14.1)	65/69 (16.7)

*Percentages are estimated. Data compiled by Kaplan-Meier method. Statistical test results of the log-rank test are: randomized comparison, $P < .001$; and combined modality therapy and radiation therapy (randomized vs nonrandomized), $P = .24$ (stratified by tumor stage). Ellipses indicate data not available because follow-up lasted less than 8 years.

†Percentages are unreliable due to the small number of people at risk.

Cooper, J. S. et al. JAMA 1999;281:1623-1627

JAMA

Table 2. Survival Estimates by Histologic Type After Combined Modality Therapy*.

Table 2. Survival Estimates by Histologic Type After Combined Modality Therapy*

Time, y	Adenocarcinoma		Squamous Cell	
	No. (%) Alive	95% Confidence Interval, %	No. (%) Alive	95% Confidence Interval, %
0	23 (100)	...	107 (100)	...
1	12 (52)	32-73	63 (59)	50-68
2	5 (22)	5-39	41 (38)	29-48
3	4 (17)	2-33	32 (30)	21-39
4	3 (13)	0-27	27 (26)	18-34
5	3 (13)	0-27	21 (21)	13-29
Total dead (median, mo)	22/23 (12.2)		91/107 (16.9)	

*Data includes randomized and nonrandomized values combined. Percentages are estimated. Data compiled by the Kaplan-Meier method. $P = .15$ for adenocarcinoma vs squamous cell carcinoma.

Operasjon vs Stråling

- Operasjon og Stråling har rapportert omtrent samme 5 års overlevelse, ca. 20-25%
- Stråling= CRT med 50Gy+CiFU (like bra som 64 Gy!!?) RTOG 85-01
- Operasjon alene ved N+ sykdom gir ca. 15% 5 års overlevelse Dis Esophagus. 2009;22(5)

Operasjon vs Stråling

- Operasjon og Stråling har rapportert samme 5 års overlevelse, ca. 20-25%
- Stråling= CRT med 50Gy+CiFU (like bra som 64 Gy!!?) RTOG 85-01
- Operasjon alene ved N+ sykdom gir 15% 5 års overlevelse Dis Esophagus. 2009;22(5)

Når man ikke vil velge ta man Ole Brumm? **CRT+ Kirurgi:**

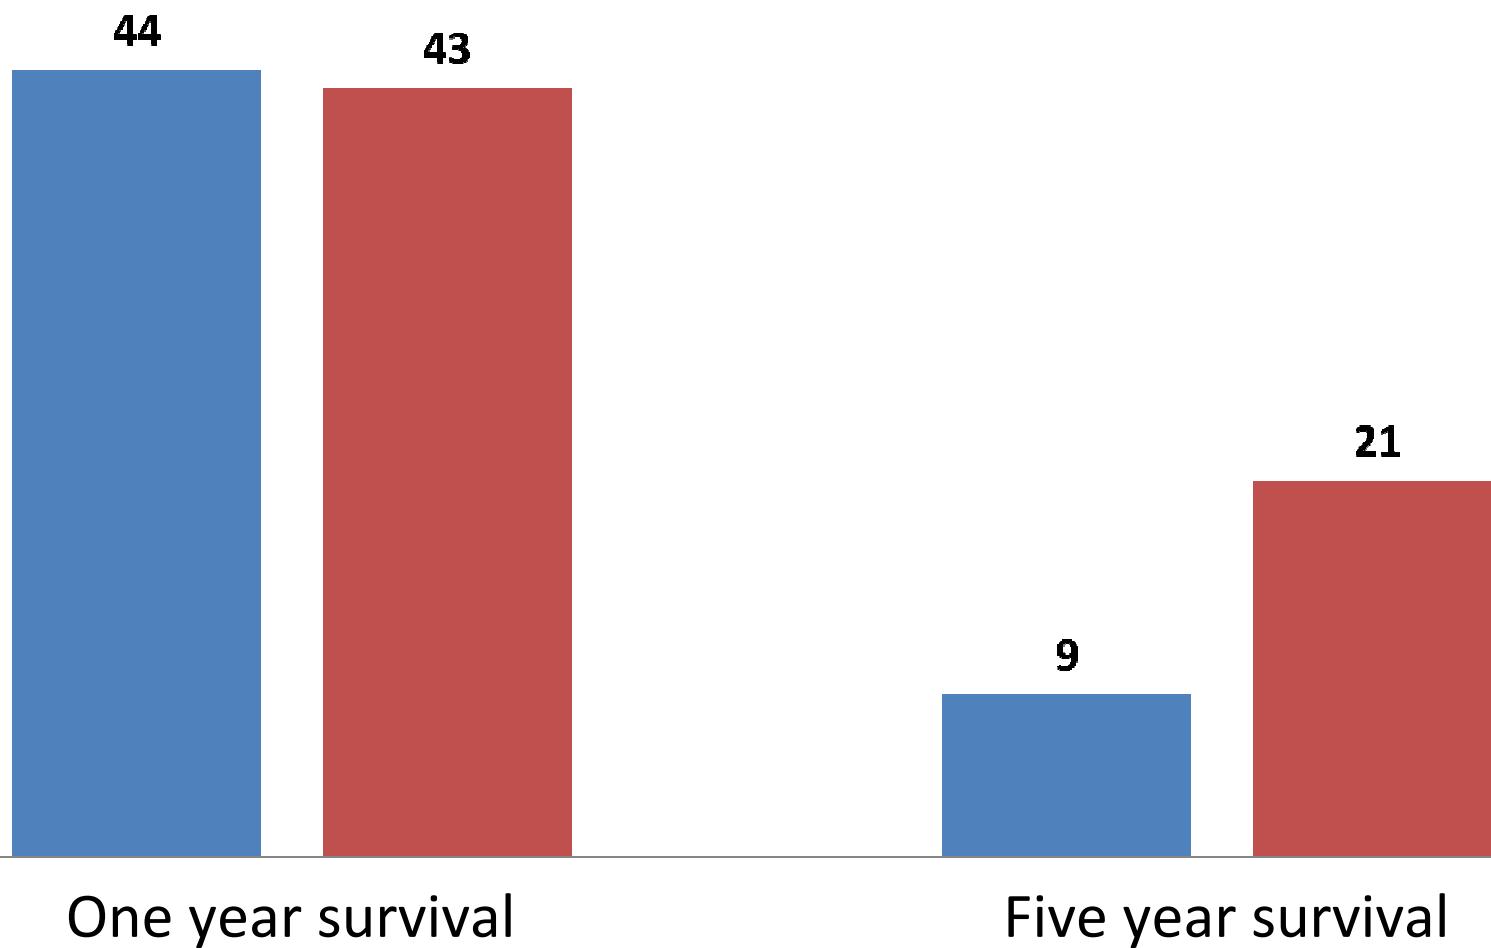

Vi venter bl.a. på CROSS-studien: 41.4 Gy + Paclitaxel (pCR på 33%)!
og NeoRes-studien (CiFu)
